## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
## Warning: Removed 1 rows containing non-finite values (`stat_bin()`).
```

```
\begin{array}{c} \text{wri 1994} \\ \text{o} \\ \text{
```

Warning in melt.data.table(., measure.vars = c("aquastat 2020", "wri 1994")):
'measure.vars' [aquastat 2020, wri 1994] are not all of the same type. By order
of hierarchy, the molten data value column will be of type 'double'. All
measure variables not of type 'double' will be coerced too. Check DETAILS in
?melt.data.table for more on coercion.
